FRENCH CHEESE SHOP

AI in Requirements Engineering

A French cheese shop demo surfaces three AI RE challenges: interpreting vague requests, using cheese knowledge and shop context, and evaluating behavior under ambiguity.

SESSION FOCUS

Learning Outcomes

1. **Interpret vague requests**

   Vague requests force the system to infer missing preferences and constraints.

SESSION FOCUS

Learning Outcomes

1

Interpret vague requests

Vague requests force the system to infer missing preferences and constraints.

2

Specify domain and operational context

The system needs domain and operational context for fitting, feasible recommendations.

SESSION FOCUS

Learning Outcomes

1. ## Interpret vague requests

Vague requests force the system to infer missing preferences and constraints.

2. ## Specify domain and operational context

The system needs domain and operational context for fitting, feasible recommendations.

3. ## Evaluate ambiguity

Judge how the system handles ambiguity, not only whether the answer is correct.

CUSTOMER QUERY

A Vague Customer Request

CUSTOMER QUERY

A Vague Customer Request

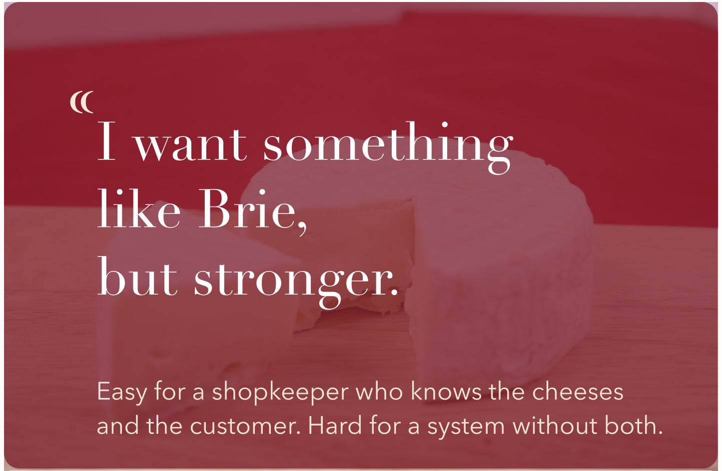

Photo: lee_2 / Pixabay

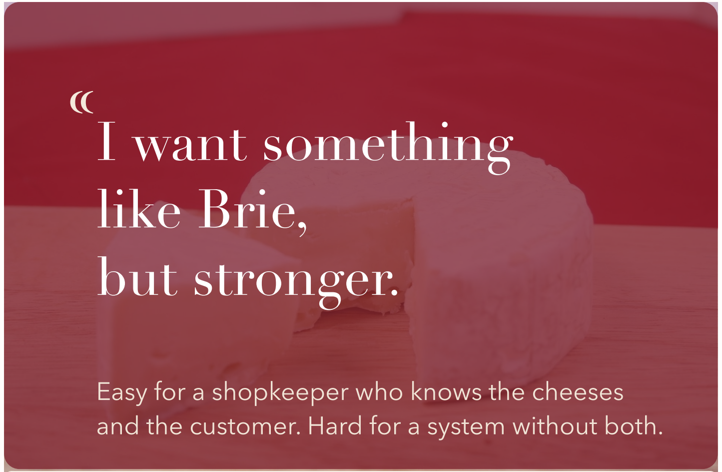
Similarity

Texture, milk type, region, serving context

CUSTOMER QUERY

A Vague Customer Request



"I want something like Brie, but stronger.

Easy for a shopkeeper who knows the cheeses and the customer. Hard for a system without both.

Photo: lee_2 / Pixabay

Similarity

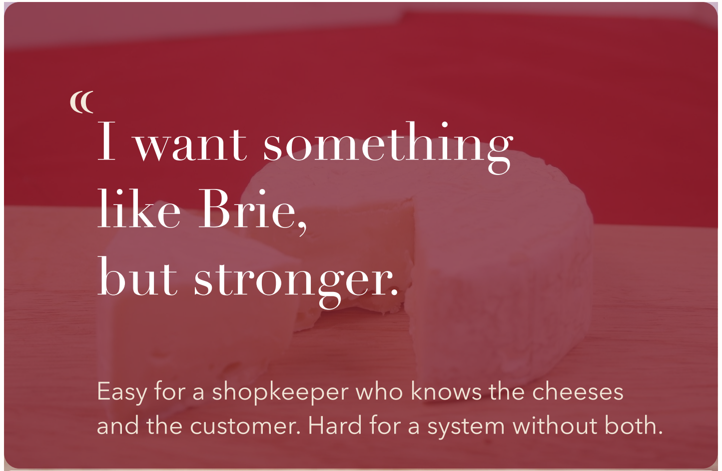
Texture, milk type, region, serving context

Strength

Age, aroma, pungency, salt

CUSTOMER QUERY

A Vague Customer Request



> “I want something like Brie, but stronger.

Easy for a shopkeeper who knows the cheeses and the customer. Hard for a system without both.

Photo: lee_2 / Pixabay

Similarity

Texture, milk type, region, serving context

Strength

Age, aroma, pungency, salt

Constraints

Budget, stock, allergies, pairings

Good answer
Best match, shortlist, or clear explanation

CONCEPTUAL SHIFT

Traditional RE vs AI-Supported RE

The key shift is from specifying functions to defining behavior under uncertainty.

Traditional

- Search cheeses by type
- Validate fields and stock
- Same input, same output
- Success = feature works

Source: [1] Nuseibeh & Easterbrook (2000)

CONCEPTUAL SHIFT

Traditional RE vs AI-Supported RE

The key shift is from specifying functions to defining behavior under uncertainty.

Traditional

- Search cheeses by type
- Validate fields and stock
- Same input, same output
- Success = feature works

AI-augmented

- Recommend from vague language
- Use data and domain knowledge
- Outputs depend on interpretation
- Success = useful, trusted fit

Source: [1] Nuseibeh & Easterbrook (2000)

CONCEPTUAL SHIFT

Traditional RE vs AI-Supported RE

The key shift is from specifying functions to defining behavior under uncertainty.

Traditional

- Search cheeses by type
- Validate fields and stock
- Same input, same output
- Success = feature works

AI-augmented

- Recommend from vague language
- Use data and domain knowledge
- Outputs depend on interpretation
- Success = useful, trusted fit

Requirements go beyond functions to specify how the system interprets vague requests.

Scan the QR code

For AI systems, requirements should specify behavior under uncertainty.

Executable requirements and design records can guide agentic implementation.

CLOSING

Closing Synthesis

Interpretation

Vague requests hide preferences, constraints, and context.

CLOSING

Closing Synthesis

Interpretation

Vague requests hide preferences, constraints, and context.

Context

Domain data, prompts, and design records become requirements artifacts.

CLOSING

Closing Synthesis

Interpretation

Vague requests hide preferences, constraints, and context.

Context

Domain data, prompts, and design records become requirements artifacts.

Evaluation

Judge usefulness, trust, and behavior under uncertainty.
